# ADIPOTHERM

## FAT CAVITATION/BODY RESHAPING

Ultrasonic waves of high intensity create small vacuum bubbles or voids in the liquid. When the bubbles attain a volume at which they can no longer absorb energy, they collapse this phenomenon is termed cavitation. The infrared energy penetrates heating the tissues and increases the blood supply within the affected energy promoting healing and cell regeneration. Blood vessels increase in diameter and allow fresh oxygen and nutrients in the bloodstream to pass through the cell walls more easily. As the damaged or inflamed area receive this increased supply of blood, the cells are nourished and cleansed. The warming effects of infrared energy dilate your arteries, blood vessels and tiny capillaries. Circulation and metabolism increase dramatically, promoting the elimination of some really nasty toxins that accumulate in the cells. These toxins include things such as poisons, carcinogenic heavy metals, toxic substances from processed food, lactic acid, free fatty acids, uric acids and subcutaneous fat associated with aging and fatigue. Stubborn areas of fat that exercise wont budge will liquify and your body will eliminate these naturally. This is an amazing treatment to get rid of cellulite, fats, and will firm and lift your body.
